Your turnkey solution

- Simplify access and registration to services
- Centralize identity and authentication management
- Optimize forms and policy management
- Make it easier to manage consent and access
- Issue verifiable credentials
- Standardize the user experience across services
- Manage multiple personas: entrepreneurs, caregivers, and more
- Unify notifications across all channels

CitizenOne: the privacy-enhancing CIAM for citizens

CitizenOne is a citizen-centric CIAM blending data protection and security best practices with a fully accessible and seamless digital service experience.

CitizenOne

Customer Identity and Access Management

Developed together
with provincial
governments

How can your organization benefit from CitizenOne?

- Helps comply with data privacy requirements by providing users with the ability to grant and withdraw consent for the use of their personal information
- Integrates with your existing applications with support for open standards like OAuth/OIDC and SAML
- Aligns to zero trust architecture best practices in securing the exchange of data
- Employs data minimization, anonymization and encryption of data in transit and at rest
- Offers API-first integration and full self-service configuration
- Displays dashboards and analytics to track adoption levels, report on the success of your program, and monitor system activity
- Utilizes DevSecOps best practices as standard, ensuring zero-down time deployments
